RE: J ■■■ A ■■■■

DATE OF ONSET: 9/19/2016

Dear Sir or Madam:

The above noted patient continues to experience symptoms of neck and lower back pain with radiation into the arms and legs despite continued care efforts. There are also paravertebral muscle spasms noted upon examination. Therefore updated ROM studies are indicated to determine range of motion levels, so as to compare with subsequent range of motion measurements. Measurable goals reflect treatment that is expected to reduce identified impairments, produce sustained changes in function, and are necessary to describe how treatment will affect injury, illness, or disability. This will enable an assessment of the patient's progress. Thus a more effective treatment regimen may be established including continued chiropractic care and/or medical specialty referral.

Respectfully,

Jeffrey Rauch, DC
